Mass Transfer and Kinetics of Ion Exchange (Nato Science Series E:)

While ion-exchange processes were originally used for the treatment of very dilute solutions, many applications for the treatment of concentrated solutions have been developed in recent years. In these situations, the mass transfer bottlenecks are located in the solid phase, rather than the liquid phase. Therefore, the development of quantitative models for ion-exchange kinetics requires knowledge about the conductance characteristics of ions and solvent in the solid phase. A useful approach towards this aim is the study of transport characteristics of these species, and of their interactions in solid ion exchange membranes. Many different transport processes and related phenomena can be observed in membrane-solution systems, e.g., ion migration, electroosmosis, diffusion and self-diffusion, osmosis, hydraulic flow, hyperfiltration (reverse osmosis) or ultrafiltration, streaming potential and streaming current, and membrane potentials (also called "membrane concentration potentials"). It is important to correlate all these phenomena so as to avoid a very large number of unnecessary measurements. Such correlation is often possible [Meares, 1976] since all these phenomena are determined by the ease of migration of the different species across the membrane. Important correlations have been made and summarized even before high-capacity ion-exchange membranes became commercially available [Sollner, 1950, 1971].

From reader reviews:

Mildred Perkins:

The knowledge that you get from Mass Transfer and Kinetics of Ion Exchange (Nato Science Series E:) is a more deep you digging the information that hide inside the words the more you get thinking about reading it. It doesn't mean that this book is hard to know but Mass Transfer and Kinetics of Ion Exchange (Nato Science Series E:) giving you joy feeling of reading. The copy writer conveys their point in particular way that can be understood by means of anyone who read that because the author of this e-book is well-known enough. That book also makes your own personal vocabulary increase well. That makes it easy to understand then can go along with you, both in printed or e-book style are available. We suggest you for having this Mass Transfer and Kinetics of Ion Exchange (Nato Science Series E:) instantly.

William Fuller:

Don't be worry should you be afraid that this book will certainly filled the space in your house, you could have it in e-book way, more simple and reachable. This Mass Transfer and Kinetics of Ion Exchange (Nato Science Series E:) can give you a lot of buddies because by you looking at this one book you have thing that they don't and make you more like an interesting person. This book can be one of a step for you to get success. This reserve offer you information that probably your friend doesn't realize, by knowing more than some other make you to be great persons. So , why hesitate? We need to have Mass Transfer and Kinetics of Ion Exchange (Nato Science Series E:).

Deanna Jackson:

As a student exactly feel bored to reading. If their teacher requested them to go to the library or to make summary for some reserve, they are complained. Just very little students that has reading's heart and soul or real their hobby. They just do what the trainer want, like asked to go to the library. They go to at this time there but nothing reading critically. Any students feel that reading is not important, boring and can't see colorful pictures on there. Yeah, it is to become complicated. Book is very important in your case. As we know that on this time, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. Therefore this Mass Transfer and Kinetics of Ion Exchange (Nato Science Series E:) can make you truly feel more interested to read.

Jason Buckley:

Some people said that they feel weary when they reading a reserve. They are directly felt this when they get a half regions of the book. You can choose the particular book Mass Transfer and Kinetics of Ion Exchange (Nato Science Series E:) to make your reading is interesting. Your personal skill of reading ability is developing when you like reading. Try to choose very simple book to make you enjoy to read it and mingle the idea about book and reading through especially. It is to be 1st opinion for you to like to start a book and examine it. Beside that the book Mass Transfer and Kinetics of Ion Exchange (Nato Science Series E:) can to be your brand new friend when you're sense alone and confuse using what must you're doing of the time.
