**The ultimate, up-to-the-minute electronic packaging resource**

The ever-increasing pin counts and clock speeds of modern electronics continue to "push the performance envelope" with regard to designing packaging and interconnection solutions that can meet increasingly challenging requirements. Here's the help you need!

For the first time, four well-known experts representing the four relevant fields--mechanical engineering, electrical engineering, thermal management, and materials--team up to provide a single-volume comprehensive reference that explains packaging and interconnection basics, details design tradeoff considerations, and presents specific system-level solutions. This unprecedented and unsurpassed multi-disciplinary coverage not only includes all the new technologies--BGA, Flip Chip, DCA, and CSP--it shows how they can be most effectively integrated.

With its clear explication of both theoretical and practical issues, *Electronic Packaging* will be of considerable and continuing value if you hope to design and/or refine more reliable, robust, and cost-effective packaging solutions for virtually any interconnect system.

As a student exactly feel bored to help reading. If their teacher requested them to go to the library or make summary for some book, they are complained. Just little students that has reading's spirit or real their leisure activity. They just do what the educator want, like asked to go to the library. They go to there but nothing reading very seriously. Any students feel that studying is not important, boring along with can't see colorful photographs on there. Yeah, it is being complicated. Book is very important for yourself. As we know that on this period of time, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. So , this Electronic Packaging: Design, Materials, Process, and Reliability can make you truly feel more interested to read.
