Biological Signals Classification and Analysis (Lecture Notes in Bioengineering) Kamran Kiasaleh

This authored monograph presents key aspects of signal processing analysis in the biomedical arena. Unlike wireless communication systems, biological entities produce signals with underlying nonlinear, chaotic nature that elude classification using the standard signal processing techniques, which have been developed over the past several decades for dealing primarily with standard communication systems. This book separates what is random from that which appears to be random and yet is truly deterministic with random appearance. At its core, this work gives the reader a perspective on biomedical signals and the means to classify and process such signals. In particular, a review of random processes along with means to assess the behavior of random signals is also provided. The book also includes a general discussion of biological signals in order to demonstrate the inefficacy of the well-known techniques to correctly extract meaningful information from such signals. Finally, a thorough discussion of recently proposed signal processing tools and methods for addressing biological signals is included. The target audience primarily comprises researchers and expert practitioners but the book may also be beneficial for graduate students.

From reader reviews:

Angelina Rone:

Now a day those who Living in the era exactly where everything reachable by match the internet and the resources in it can be true or not need people to be aware of each details they get. How people have to be smart in obtaining any information nowadays? Of course the answer is reading a book. Examining a book can help persons out of this uncertainty Information particularly this Biological Signals Classification and Analysis (Lecture Notes in Bioengineering) book since this book offers you rich information and knowledge. Of course the details in this book hundred pct guarantees there is no doubt in it you may already know.

Bridget Dell:

The ability that you get from Biological Signals Classification and Analysis (Lecture Notes in Bioengineering) may be the more deep you looking the information that hide into the words the more you get serious about reading it. It does not mean that this book is hard to recognise but Biological Signals Classification and Analysis (Lecture Notes in Bioengineering) giving you excitement feeling of reading. The article author conveys their point in particular way that can be understood through anyone who read it because the author of this guide is well-known enough. This kind of book also makes your personal vocabulary increase well. Therefore it is easy to understand then can go along with you, both in printed or e-book style are available. We highly recommend you for having this particular Biological Signals Classification and Analysis (Lecture Notes in Bioengineering) instantly.

James Brown:

Don't be worry if you are afraid that this book will certainly filled the space in your house, you can have it in e-book way, more simple and reachable. This kind of Biological Signals Classification and Analysis (Lecture Notes in Bioengineering) can give you a lot of good friends because by you taking a look at this one book you have point that they don't and make you actually more like an interesting person. This specific book can be one of one step for you to get success. This reserve offer you information that probably your friend doesn't understand, by knowing more than different make you to be great men and women. So , why hesitate? We need to have Biological Signals Classification and Analysis (Lecture Notes in Bioengineering).

Donald Mobley:

Guide is one of source of information. We can add our information from it. Not only for students but native or citizen will need book to know the update information of year to be able to year. As we know those books have many advantages. Beside all of us add our knowledge, could also bring us to around the world. From the book Biological Signals Classification and Analysis (Lecture Notes in Bioengineering) we can take more advantage. Don't that you be creative people? To be creative person must love to read a book. Simply choose the best book that suitable with your aim. Don't become doubt to change your life with this book Biological Signals Classification and Analysis (Lecture Notes in Bioengineering). You can more desirable than now.
