Global Environment: Water, Air, and Geochemical Cycles Elizabeth Kay Berner, Robert A. Berner

Based on *Global Water Cycles*, 1987, this paperback volume can be used to supplement a core geochemistry text or as a stand-alone text. Written by two well-known researchers, this text provides a multidisciplinary approach to a number of environmental topics on water, air, and atmospheric chemistry. Coverage ranges from aspects of geology, oceanography and meteorology, to environmental science, soil science, biogeochemistry, and limnology. Features coverage on atmospheric chemistry with emphasis on the carbon cycle, the most up-to-date statistics on the greenhouse effect, and the ozone hole. Reflects the inclusion of non-aqueous topics on atmospheric chemistry (such as atmospheric CO₂ and ozone). Covers a large number of environmental topics on water and atmospheric chemistry. Emphasizes natural processes that affect the major elements as they provide a background against which to measure human-induced changes.
