Introduction to Parallel Processing: Algorithms and Architectures (Series in Computer Science)

Behrooz Parhami

THE CONTEXT OF PARALLEL PROCESSING The field of digital computer architecture has grown explosively in the past two decades. Through a steady stream of experimental research, tool-building efforts, and theoretical studies, the design of an instruction-set architecture, once considered an art, has been transformed into one of the most quantitative branches of computer technology. At the same time, better understanding of various forms of concurrency, from standard pipelining to massive parallelism, and invention of architectural structures to support a reasonably efficient and user-friendly programming model for such systems, has allowed hardware performance to continue its exponential growth. This trend is expected to continue in the near future. This explosive growth, linked with the expectation that performance will continue its exponential rise with each new generation of hardware and that (in stark contrast to software) computer hardware will function correctly as soon as it comes off the assembly line, has its down side. It has led to unprecedented hardware complexity and almost intolerable development costs. The challenge facing current and future computer designers is to institute simplicity where we now have complexity; to use fundamental theories being developed in this area to gain performance and ease-of-use benefits from simpler circuits; to understand the interplay between technological capabilities and limitations, on the one hand, and design decisions based on user and application requirements on the other.

From reader reviews:

Van Gee:

Why don't make it to become your habit? Right now, try to prepare your time to do the important take action, like looking for your favorite book and reading a book. Beside you can solve your short lived problem; you can add your knowledge by the reserve entitled Introduction to Parallel Processing: Algorithms and Architectures (Series in Computer Science). Try to the actual book Introduction to Parallel Processing: Algorithms and Architectures (Series in Computer Science) as your pal. It means that it can be your friend when you really feel alone and beside regarding course make you smarter than ever before. Yeah, it is very fortunated in your case. The book makes you considerably more confidence because you can know every little thing by the book. So , let me make new experience along with knowledge with this book.

Howard Benedict:

The book with title Introduction to Parallel Processing: Algorithms and Architectures (Series in Computer Science) has a lot of information that you can find out it. You can get a lot of profit after read this book. This book exist new understanding the information that exist in this e-book represented the condition of the world at this point. That is important to yo7u to learn how the improvement of the world. This kind of book will bring you within new era of the internationalization. You can read the e-book in your smart phone, so you can read that anywhere you want.

Wayne Gaddis:

This Introduction to Parallel Processing: Algorithms and Architectures (Series in Computer Science) is fresh way for you who has curiosity to look for some information since it relief your hunger info. Getting deeper you on it getting knowledge more you know otherwise you who still having tiny amount of digest in reading this Introduction to Parallel Processing: Algorithms and Architectures (Series in Computer Science) can be the light food for you because the information inside this particular book is easy to get by means of anyone. These books acquire itself in the form that is certainly reachable by anyone, sure I mean in the e-book application form. People who think that in guide form make them feel drowsy even dizzy this guide is the answer. So there is absolutely no in reading a reserve especially this one. You can find actually looking for. It should be here for an individual. So , don't miss it! Just read this e-book variety for your better life as well as knowledge.

James Bouchard:

As we know that book is essential thing to add our information for everything. By a reserve we can know everything we want. A book is a range of written, printed, illustrated or perhaps blank sheet. Every year seemed to be exactly added. This reserve Introduction to Parallel Processing: Algorithms and Architectures (Series in Computer Science) was filled about science. Spend your time to add your knowledge about your research competence. Some people has various feel when they reading the book. If you know how big selling

point of a book, you can sense enjoy to read a guide. In the modern era like at this point, many ways to get book that you just wanted.
