Cryogenic Process Engineering (International Cryogenics Monograph Series) Klaus D. Timmerhaus, Thomas M. Flynn

Cryogenics, a term commonly used to refer to very low temperatures, had its beginning in the latter half of the last century when man learned, for the first time, how to cool objects to a temperature lower than had ever existed naturally on the face of the earth. The air we breathe was first liquefied in 1883 by a Polish scientist named Olszewski. Ten years later he and a British scientist, Sir James Dewar, liquefied hydrogen. Helium, the last of the so-called permanent gases, was finally liquefied by the Dutch physicist Kamerlingh Onnes in 1908. Thus, by the beginning of the twentieth century the door had been opened to a strange new world of experimentation in which all substances, except liquid helium, are solids and where the absolute temperature is only a few microdegrees away. However, the point on the temperature scale at which refrigeration in the ordinary sense of the term ends and cryogenics begins has never been well defined. Most workers in the field have chosen to restrict cryogenics to a temperature range below -150°C (123 K). This is a reasonable dividing line since the normal boiling points of the more permanent gases, such as helium, hydrogen, neon, nitrogen, oxygen, and air, lie below this temperature, while the more common refrigerants have boiling points that are above this temperature. Cryogenic engineering is concerned with the design and development of low-temperature systems and components.

From reader reviews:

James Conner:

The book Cryogenic Process Engineering (International Cryogenics Monograph Series) can give more knowledge and also the precise product information about everything you want. Why must we leave a good thing like a book Cryogenic Process Engineering (International Cryogenics Monograph Series)? Several of you have a different opinion about publication. But one aim in which book can give many details for us. It is absolutely correct. Right now, try to closer along with your book. Knowledge or data that you take for that, it is possible to give for each other; it is possible to share all of these. Book Cryogenic Process Engineering (International Cryogenics Monograph Series) has simple shape but the truth is know: it has great and large function for you. You can search the enormous world by wide open and read a book. So it is very wonderful.

Michelle Porter:

Spent a free a chance to be fun activity to do! A lot of people spent their leisure time with their family, or all their friends. Usually they accomplishing activity like watching television, gonna beach, or picnic from the park. They actually doing same every week. Do you feel it? Do you want to something different to fill your own personal free time/ holiday? Could possibly be reading a book might be option to fill your totally free time/ holiday. The first thing that you will ask may be what kinds of book that you should read. If you want to try out look for book, may be the publication untitled Cryogenic Process Engineering (International Cryogenics Monograph Series) can be good book to read. May be it can be best activity to you.

Mark Morrow:

The actual book Cryogenic Process Engineering (International Cryogenics Monograph Series) has a lot of knowledge on it. So when you read this book you can get a lot of gain. The book was published by the very famous author. This articles author makes some research ahead of write this book. This kind of book very easy to read you can obtain the point easily after looking over this book.

Jeffrey Martinez:

People live in this new moment of lifestyle always aim to and must have the time or they will get lot of stress from both lifestyle and work. So , when we ask do people have extra time, we will say absolutely sure. People is human not really a huge robot. Then we consult again, what kind of activity have you got when the spare time coming to you actually of course your answer will unlimited right. Then do you try this one, reading publications. It can be your alternative throughout spending your spare time, the book you have read is usually Cryogenic Process Engineering (International Cryogenics Monograph Series).
